

TASKS

- ☐ Homepage;
 - About us - more literature about CU, Program, schedules and events
 - Events(major past events) or any upcoming
 - Notice board(allows admin to post notices and user is able to view)
 - Join us - linked to a registration form
 - Contact us
 - CU socials
- ☐ Ministries & Eve Teams;
 - basic description of what the ministry is about
 - Eve teams linked to their different Facebook pages
 - The display format will depend on the designer... Can choose carousels or any other way that can best represent these information
- ☐ Blogs & Articles;
 - Allows admin to post an article or blog
- ☐ E-Library;
 - Allows upload, download and allows has a well defined structure for storing books based on genre... Have a defined search algorithm that can enable search via author, book title or genre,
 - As well, the admin side can have some sort of display that shows which books have been downloaded and which ones are searched but may not be there ... So all those entries to the search bar to have where they can be stored
- ☐ “How can we pray with you?” (Pray with me 🙏)
 - Allows sender to send this should have a well defined on-click functionality that enables the text to reach the prayer coord or rather admin via email or phone
- ☐ Leadership & Committees;
 - Should contain all exec photos, names and position,
 - A word from the chairperson
 - A description of how leadership between ministry, eve teams are and how various committees come in play
- ☐ Registration;
 - Have a form that on-click will post the data to a database with a label table... Thus can contain name, and such details and the student marker is the ID thus set a restriction to only students to be able to do the same and register
- ☐ Voting;
 - Have a form that contains the relevant posts, and the submit is able to post all people selected into different positions... So it should display on the other end all chairmen in one column in that manner.... It can be in a way the results are posted to the DB but then from the console, the nominations committee is able to retrieve all this information. Remember those who can access this are only those who are eligible to vote .. hence when I click it should redirect me to verify my details and if it matches those in the database for that season then I am able to vote... We said we will register annually so when I'm redirected to validate that I am a student....if I call my admission and it retrieves a similar admission from the DB then I should be eligible but if I had not registered that year then I am not eligible.... But you can see how you restrict only to those who are in session to be able to vote
- ☐ Semester Evaluation;
 - This can be forms that enables for evaluation but the posting to be maybe directly to the secretary or something

☐ Giving;

- Photos and sermons - the suggestion that maybe they can be in a list and be labeled for each Sunday and linked to the Facebook page where the video is instead of having to post large videos in our DB yet even we could use YouTube API if they can be made available in YouTube...
 - As well there should be clips eg creative family clips, mission mobilization clips, and such .. find a way they can be posted from the admin console to the main page as well as how they can be pulled down....
-
- Since we agreed that we want to make it usable for ones who will be managing the system... The "admin" console is to allow most of these things to happen well... Thus if it is something that may need correction... Have a simple way of managing it e.g. upload, delete, alter texts....
